Add UC-II® Products to Your Store Today

UC-II® is made in the United States and is backed by two studies in people with osteoarthritis and in young, healthy, active adults — just 40 mg a day may help increase compliance issues often seen in bulkier joint-health products.

Opportunities

Evolving category

UC-II® is an undenatured type II collagen that works differently than glucosamine + chondroitin as well as other collagens. Glucosamine and chondroitin have been increasingly in the news about poor efficacy, leading consumers to consider other joint-health ingredients.

Growing interest among healthy, active adults

UC-II® has been studied in healthy, active adults to help alleviate joint pain due to strenuous exercise. A growing number of adults are interested in supporting their joint health to help maintain their active lifestyle.

Pill fatigue

UC-II®'s 40 mg, once-a-day efficacy has allowed manufacturers to formulate smaller size pills that consumers only need to take once a day.

- *Small 40 mg, once-a-day dosage*
- *Sourced and manufactured in the United States*
- *Two published human research studies*
- *Research includes healthy, active adults*
- *Extensive safety research*

Consumers are Constantly Looking for Efficacy and Convenience—Give them UC-II®

How UC-II® Works

Research shows that UC-II®, a patented ingredient, supports knee function and comfort.

UC-II® is different from other joint supplements. UC-II is made of undenatured type II collagen.

This unique form of collagen tells specific cells in the small intestine to send messages to the body's knee joints to produce new joint tissue, called cartilage, thereby improving the function and comfort of the joint.

UC-II® Research Overview

UC-II® supplies a patented form of undenatured type II collagen for joint health support. UC-II® has undergone rigorous third-party research and testing for efficacy, safety and quality.

The research path of UC-II® began when researchers, including those at Harvard University Medical Center, found the benefits of undenatured type II collagen for joint health and published research in peer-reviewed journals. InterHealth has continued to systematically build the research portfolio for UC-II®. Research shows that 40 mg of UC-II® a day supports joint comfort, mobility and flexibility.

Research in Young, Active Adults

Just 40 mg of UC-II® a day significantly improved knee extension compared to placebo in a randomized, double-blind, placebo-controlled study in healthy subjects after 120 days. UC-II® subjects exercised longer before experiencing joint discomfort and recovered faster from joint discomfort after exercising compared to baseline. It may be possible to exercise longer with UC-II® before experiencing joint discomfort.

40 mg of UC-II®

Just 40 mg of UC-II® a day significantly reduced key parameters of joint pain measurement after 90 days. UC-II® reduced official measures of joint discomfort by as much as 40% compared to baseline. Glucosamine and chondroitin reduced these measures as much as 15% compared to baseline.

Look for UC-II® Advertisement in Arthritis Today

Arthritis Today reaches an audience of over more than 50 million adults looking for joint health solutions. Arthritis Today readers often purchase products after seeing a health-focused advertisement.

Arthritis Today motivates, inspires and educates. Look for the UC-II® advertisement in the bi-monthly issues of Arthritis Today.

As Seen in Mainstream Media

UC-II® has been featured in consumer magazines your customers read. A recent editorial in Shape magazine discusses supplementing with UC-II® and details the benefits seen in the healthy subject research.

Men's Fitness, Muscle & Fitness and Flex magazine have all featured UC-II® in 2014. A UC-II® product was also featured on the popular daytime television show, The Doctors. The InterHealth UC-II® brand team is hard at work to get editorial coverage in such magazines as Runner's World and Men's Health.

A nice balance between targeted advertising and mainstream editorial coverage should bring consumers looking for joint health support into your store asking for UC-II®.

InterHealth Nutraceuticals

For over 25 years, InterHealth Nutraceuticals has been providing unique, quality ingredients to the nutrition industry. Our value-added ingredients include UC-II®, Super CitriMax®, Meratrim® and ChromeMate®. UC-II offers consumers a small once-a-day option for joint health.

UC-II®

Brand recognition brings customers into your store. Once a day option helps increase sales. Efficacy ensures repeat purchase.
